

BOBBADI HARSHA VARDHAN

Cloud Engineer

bobbadiharsha628@gmail.com | +91-9381561639

PROFESSIONAL SUMMARY

Motivated Computer Science graduate with hands-on experience in Java, Spring Boot, MySQL, AWS, and DevOps tools. Skilled in developing backend applications using Java and Spring Boot, working with databases, and deploying applications using Docker, Kubernetes, Jenkins, GitHub Actions, and Ansible. Familiar with AWS cloud services, CI/CD pipelines, Linux administration, version control, and application monitoring. Strong understanding of Data Structures and Algorithms with a continuous interest in building scalable and reliable software solutions.

WORK EXPERIENCE

AWS & DevOps Intern — Technical Hub

- Gained hands-on experience in AWS Cloud and DevOps through practical projects and real-world lab environments.
- Worked with AWS services including EC2, S3, RDS, IAM, VPC, EBS, Load Balancer, Auto Scaling, CloudWatch, and Route 53.
- Built and managed CI/CD pipelines using Jenkins and GitHub Actions.
- Worked with Docker and Kubernetes for containerization and application deployment.
- Used Ansible for configuration management and automation.
- Managed source code using Git and GitHub and worked with Maven, SonarQube, and Nexus in CI/CD workflows.
- Performed server administration, application deployment, and troubleshooting using Linux.

Technical Skills

Programming: Java, JavaScript, SQL

Data Structures & Algorithms: DSA, Problem Solving

Backend: Spring Boot, REST APIs

Frontend: HTML5, CSS3, JavaScript

Database: MySQL

Cloud: AWS(S3,EC2,CDN,Lambda,EBS,IAM,EFS,Fsx,Route53,RDS,VPC,etc,...)

DevOps & CI/CD: Git, GitHub, GitHub Actions, Jenkins, Docker, Kubernetes, Ansible

Build & Code Quality: Maven, SonarQube, Nexus Repository

Operating System: Linux

EDUCATION

Nov 2022 – May 2026

Bachelor of Engineering & Technology

Aditya College Of Engineering & Technology

- Final CGPA: 8.5

Projects

AWS 3-Tier Web Application Architecture

- Designed a highly available 3-tier architecture on AWS using VPC, public/private subnets, ALB, EC2, NAT Gateway, Internet Gateway, and RDS MySQL.
- Configured route tables, security groups, and IAM to implement secure communication between web, application, and database tiers.
- Implemented IAM, security groups, and least-privilege access controls to secure AWS resources.
- Deployed application servers in private subnets and used CloudWatch for infrastructure monitoring.

Secure Multi-Organization Cloud File Sharing Using Hybrid Cryptography and Blockchain Auditing

- Developed a secure cloud-based file-sharing platform supporting role-based access control. Authentication through AWS Cognito.
- Implemented hybrid encryption using AES-128-GCM and RSA for enhanced security.
- Integrated AWS Lambda with ClamAV for automated malware scanning.
- Designed blockchain-inspired immutable audit logging using SHA-256 and DynamoDB. Fundamental blockchain implementation
- Implemented secure authentication using JWT.
- Deployed the application with AWS backend services, ensuring scalability, security, and high availability.

DevOps CI/CD Pipeline for Spring Boot Application

- Developed a Spring Boot application using Java and MySQL and containerized it using Docker.
- Built a CI/CD pipeline using Jenkins, GitHub Actions, Maven, SonarQube, and Nexus for automated build, testing, code analysis, and artifact management.
- Deployed the Dockerized application on AWS EC2 with Amazon RDS MySQL and configured AWS networking and security.
- Used Ansible and Linux for server configuration and deployment automation.

Certificates

- AWS Cloud Practitioner
- Java-IT specialist
